

Money Path Map

Money is not in the product. It moves along the path between a real need and a delivery that works.

PAINTED PLATE — HELD FOR CHAIRMAN SCENE-CONTRACT APPROVAL

Contract SC-615-03 · no image generated (rule of Chairman rejection 614)

A hand-drawn map across a table: one coin at the start, gates along the road, and a small ledger at the end showing where it arrived.

This map lets you follow one dollar — or ten — from the person who pays to everyone it reaches, and see each place it can leak, stall or be claimed. It uses two lines. Every number is marked **OBSERVED** (seen in a real record), **ESTIMATED** (calculated from a stated rule), or **UNKNOWN** (not yet known). Nothing moves from UNKNOWN to OBSERVED by hoping.

The two lines

$$N = P - F - T - D$$

Payment, minus fees, minus tax passed through, minus the cost of delivering, leaves **N** — the only money anyone can share.

$$N = B + C + A + O + R$$

N is shared between beneficiary, creator, approved partner, operation and reserve, and the shares must be written down before the sale. One dollar stays one dollar: a share can never add up to more than N.

Where a gap can sit (Chairman, sequence 599)

Position	What the gap is doing	Example on the path
SIGNAL	Shows you something is missing	A product with no buyers yet
BLOCK	Stops money or delivery on purpose	Checkout closed until the file is ready
BUFFER	Gives time to absorb a problem	The reserve R for refunds
BRIDGE	Connects two sides that could not meet	A partner who reaches people who need help
BRANCH	Splits one flow into several	The $N = B + C + A + O + R$ line itself

A gap is not good or bad. It is placed well or badly.

Worked example: “I need \$10”

Using this store’s own record. The only paid sale on record is order #1004: Twelve Miles for Flour, \$1.99.

Line	Value	Label
P, payment	\$1.99	OBSERVED — order #1004
F, card fee	\$0.36	OBSERVED — transaction fee on #1004
T, tax	\$0.00	OBSERVED on #1004; varies by buyer location
D, delivery	\$0.00	OBSERVED — digital, nothing ships
N	\$1.63	OBSERVED
Sales needed for \$10	$n = \text{ceil}(10 \div 1.63) = 7$	ESTIMATED from the rule
Will 7 people buy?	—	UNKNOWN — no outside buyer recorded yet
When is it in the bank?	—	UNKNOWN — payout schedule not read

So “\$10” means 7 real buyers of that item, and it is not money in the bank until the payout settles. Anyone who promises the \$10 before those two facts is guessing.

Map your own path

Stop on the path	Amount	OBSERVED / ESTIMATED / UNKNOWN	Where you saw it
Who pays, and how much (P)			
Platform or card fee (F)			
Tax (T)			
Cost to deliver (D)			
What is left (N)			
Beneficiary (B)			
Creator (C)			
Approved partner (A)			
Operation (O)			
Reserve (R)			
Date it is actually in the account			

Four questions for any “proceeds go to...” promise

1. Proceeds of what — the price, or what is left after fees and costs?
2. To whom — a named organisation or person, or a category like “the homeless”?
3. How much is already in the pot, what is the ceiling, and what does each dollar buy?
4. Who confirms it arrived, and when will you see the report?

From the source (Chairman, sequence 608): “how is that money gonna be allocated ... how much is in the pot now ... is there a ceiling?”

The price of this map

$N = P - F - T - D$ For one \$3.00 copy: \$3.00 – \$0.39 card fee – T (sales tax, passed through) – \$0.00 delivery = \$2.61 – T. Then $N = B + C + A + O + R$, written down before the first sale.

PROPOSED price, not authorized. Educational only — not financial, tax or legal advice. Not a donation or charity program.
